532 figures at pa·la·ku·č (fig. 14), at 3 South Fork sites all figures painted in red; at pa·la·ku·č majority of figures in red, but a few in red and black and one, of snake (?), in black, outlined in yellow.

Little or no plastic representation, except for crude dolls children made; no realistic carving. Tule image of deceased person carried at mourning ceremony (see Rituals).

[778]

531 Symbolism apparently entirely lacking; informants could give no explanations for feather wand, woodpecker bands, other paraphernalia carried at mourning ceremonies (see Rituals); one item common among Great Basin, California tribes, that of decorating baby cradles according to sex of child (Kelly, 134; Steward, 1933, 273; Kroeber, Handbook, 536) consistently denied among Tübatulabal. A few basket patterns had descriptive names (ante).

[171]

● 802 Knowledge.- Decimal system used; count has been recorded (Voegelin, 1935 a, 178). Large numbers of rabbits, fish which were to be divided between several persons had to be portioned out. Sticks, marks in sand not used in division.

805 Year (šuwa·l, world) divided into u·dalami·k, fall, "when the sun is shorter" (SM); tomo·waš, winter; taha·waš, summer, "when the sun goes higher" (SM). Doubtful if solstices observed. Year divided into lunations, months starting on each crescent moon; some lunations named descriptively: ču·u·ga·nan čuwi·la·t, icicles hanging down (January?), which was followed by hu·litap, everything green; ku·la·^{wit}, when grass is ready to bloom; ibi·n wi·^{yal}, time when flowers bloom. Rest of lunations unnamed or informants had forgotten their names; no month names taken from names for fingers.

821 Stars (šu·l) not used at night for guidance;
773 not counted above 3 (Voegelin, 1935 a, 179) because "a long time ago the Indians counted all the stars and they died; that's why they're afraid to count them now" (SM). Milky Way (owi·dinpo'in, dove's fire) caused by doves who "made a fire and the smoke went white" (SM); this part of myth which SM would not tell in summertime. "The Mexicans say the Milky Way is piñole" (SM). Pleiades (a·na·wišt) are 7 women who left husbands and went up in sky. Morning star (yeu'wišn) seemed to have no myth connected with it. SM had heard of star shower, but had no comments to make.

Crescent moon lying on back presages dry weather; upright it is full of water (SM). Rainbow (tanibo·'in) has myth attached to it.

At eclipse of sun (u·muktal) people put powdered tobacco on palm of hand and blew it toward sun, shouting 3 times, "Sun, don't die; come alive," or similar entreaties. If sun should ever die, large snake (wai·i·ni·š) living up in sky would fall to earth (SM).

823 Earth dome-shaped, surrounded by water. Earth-
773 quakes (šuwa·l šidu·gat, world shaking) caused by woman (p. 60).

Directional terms obsolescent; wi·nan, N, pa·lami·k, W, talami·k, E; possibly others.
